

Overseas Focused Portfolios

Summary

Portcullis Asset Management is a trading name of RC Brown Investment Management, and has been created to manage the Overseas Focused Portfolio range, following a specific request from a Financial Adviser firm wanting a more global bias.

We take a highly disciplined approach to managing investments, which begins by deciding on the overall structure of the portfolio, to ensure it contains the most appropriate balance between different asset types and geographical markets to achieve the particular investment objectives. By avoiding over-concentration in any one fund or market sector, we aim to achieve consistent, above average long-term performance without exposing our clients to undue volatility or risk.

We invest directly only in our core areas of expertise, primarily UK equities, and use a combination of talented third party managers and an index approach elsewhere. We have particular expertise and access to the 'wholesale markets' – Initial Public Offerings (IPOs), Rights Issues, Placings by companies to raise new share capital, and Placings by Known Sellers.

In selecting funds we favour managers with consistently good performance and a robust and coherent investment approach. However in addition to this we use sophisticated analytical tools to understand the style bias of each individual fund and that of the combined portfolio.

Asset Allocation

The Asset Allocation model for the Portcullis Asset Management Overseas Focused portfolios is:

Asset Class	Cautious	Cautious Balanced	Balanced	Balanced Growth	Growth

- Clients can switch between our Core portfolio range and Portcullis AM Overseas Focused portfolio range for free.

Custody Fees

A flat-rate Custody Fee of 0.30% pa will be charged monthly, at the same time as the Investment Management fee.

Risk Warnings

Investing in equities involves risk. The value of investments, and the income from them, can go down as well as up. Investments may be subject to an initial charge. You may not get back all that you originally invested, particularly in the case of early withdrawal.

For portfolios invested in overseas markets, the value of investments may also rise and fall purely as a result of exchange rate changes. Investment in corporate bonds involves some risk to capital and income, particularly in the event of default by the issuer.

Some portfolios may include investment funds (including hedge funds and funds of hedge funds) that use gearing as part of their investment strategy. Such investment funds may be subject to sudden and large falls in value and you may get back nothing on this part of your portfolio if the fall in value is sufficiently large.
